(57) Abstract :
 One technological issue to be addressed in one embodiment of the present invention is the connection of a variety of learning material requested by a student with a smart education application, thereby providing learning content such as video clips, pictures, live broadcasts, and problem banks as well as other types of media. A smart education system, according to one embodiment is disclosed, which includes a smart education server to which an administrator or instructor uploads a plurality of learning content items and which provides a service for learning content such as video clips, images, a live broadcast and learning material; a student terminal on which the smart education application is loaded and connected to the smart education server with IoT enabled technology; and a smart education application on which the smart education application is loaded and connected to the smart education server with IoT enabled technology.
