More precisely, it is the act of stealing or destroying information by using or hacking into the Internet, mobile and other devices. If the software on the bank server is compromised, the computers connecting to it can also be compromised. Any networked has a certain amount of computer security risk. Especially when playing a game that is connected to another computer or connected to the Internet, malicious users can remotely monitor your computer by exploiting bugs, targeting other computers, or installing software such as Trojan horses, adware or spywares, or other critical information on your computer.
